

In re TURNER ET AL., Application No. 09/705,395  
Amendment A

**Amendments to the Claims:**

The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (currently amended): A method for pacing the flow of information from a device, the method comprising:

~~maintaining a plurality of timing wheels;~~

inserting an entry into one of ~~the~~ a plurality of timing wheels;

removing the entry from said one of the plurality of timing wheels at an appropriate time corresponding to a position of the entry in the plurality of timing wheels;

placing the entry into a transmit list in response to removing the entry from said one of the plurality of timing wheels;

removing the entry from the transmit list; and

in response to the entry being removed from the transmit list: sending information corresponding to the ~~entry~~, ~~entry from the device~~ determining a next target time, and re-inserting the entry removed from the transmit list into the plurality of timing wheels based on the next target time.

Claims 2-8 (canceled)

Claim 9 (original): The method of claim 1, wherein the plurality of timing wheels include two timing wheels each having different time granularities.

In re TURNER ET AL., Application No. 09/705,395  
Amendment A

Claim 10 (currently amended): The method of claim 1, ~~further comprising re-inserting the entry into the plurality of timing wheels based on a~~ wherein the next target time is determined from a last target time ~~to send information.~~

Claim 11 (canceled)

Claim 12 (original): A method for pacing the flow of a plurality of streams of information from a device, the plurality of streams including a first stream having a corresponding first pacing rate identifier and a second stream having a corresponding second pacing rate identifier, the method comprising:

maintaining a plurality of timing wheels;

inserting the first pacing rate identifier into the plurality of timing wheels at a position corresponding to a first sending time to send a packet from the first stream;

inserting the second pacing rate identifier into the plurality of timing wheels at a position corresponding to a second sending time to send a packet from the second stream;

sequencing through the plurality of timing wheels at a plurality of predetermined rates wherein at approximately the first sending time removing the first pacing rate identifier from the plurality of timing wheels and inserting the first pacing rate identifier into a transmit list, and at approximately the second sending time removing the second pacing rate identifier from the plurality of timing wheels and inserting the second pacing rate identifier into the transmit list;

removing the first pacing rate identifier from the transmit list, sending a packet from the first stream, and re-inserting the first pacing rate identifier into the plurality of timing wheels; and

removing the second pacing rate identifier from the transmit list, sending a packet from the second stream, and re-inserting the second pacing rate identifier into the plurality of timing wheels.

In re TURNER ET AL., Application No. 09/705,395  
Amendment A

Claim 13 (original): The method of claim 12, wherein the first pacing rate identifier is inserted into the transmit list before the second pacing rate identifier, the first and second pacing rate identifiers are in the transmit list at the same time, and the second pacing rate identifier is removed from the transmit list before the first pacing rate identifier.

In re TURNER ET AL., Application No. 09/705,395  
Amendment A

Claim 14 (original): A method for pacing the flow of a plurality of streams of information from a device, the plurality of streams including a first stream having a corresponding first pacing rate identifier and a second stream having a corresponding second pacing rate identifier, the method comprising:

- maintaining a plurality of timing wheels including a first timing wheel and a second timing wheel;

- maintaining a plurality of transmit lists including a first transmit list corresponding to the first timing wheel and a second transmit list corresponding to the second timing wheel;

- inserting the first pacing rate identifier into the first timing wheel at a position corresponding to a first sending time to send a packet from the first stream;

- inserting the second pacing rate identifier into the second timing wheel at a position corresponding to a second sending time to send a packet from the second stream;

- sequencing through the plurality of timing wheels at a plurality of predetermined rates wherein at approximately the first sending time removing the first pacing rate identifier from the plurality of timing wheels and inserting the first pacing rate identifier into the first transmit list, and at approximately the second sending time removing the second pacing rate identifier from the plurality of timing wheels and inserting the second pacing rate identifier into the second transmit list;

- removing the first pacing rate identifier from the first transmit list, sending a packet from the first stream, and re-inserting the first pacing rate identifier into the plurality of timing wheels; and

- removing the second pacing rate identifier from the second transmit list, sending a packet from the second stream, and re-inserting the second pacing rate identifier into the plurality of timing wheels.

In re TURNER ET AL., Application No. 09/705,395  
Amendment A

Claim 15 (original): The method of claim 14, wherein the first timing wheel has a finer timing granularity than the second timing wheel, and wherein items are removed from the second transmit list only if the first transmit list is empty.

Claims 16-24 (canceled)

Claim 25 (new): The method of claim 1, wherein the transmit list includes at least one other entry removed from a particular one the plurality of timing of timing wheels when said removing the entry from the transmit list is performed.

Claim 26 (new): The method of claim 1, wherein each of the plurality of timing wheels are used to schedule information of a same priority level.

Claim 27 (new): The method of claim 1, comprising selecting said one of the plurality of timing wheels, prior to said inserting the entry, based on said one of the plurality of timing wheels having the finest granularity of said wheels of the plurality of timing wheels and whose range includes the target time of the entry and irregardless of a rate corresponding to the entry.

Claim 28 (new): The method of claim 12, wherein each of the plurality of timing wheels are used to schedule information of a same priority level.

Claim 29 (new): The method of claim 14, wherein each of the plurality of timing wheels are used to schedule information of a same priority level.

In re TURNER ET AL., Application No. 09/705,395  
Amendment A

Claim 30 (new): One or more computer-readable media containing computer-executable steps for pacing the flow of information from a device, said steps comprising:

- inserting an entry into one of a plurality of timing wheels;
- removing the entry from said one of the plurality of timing wheels at an appropriate time corresponding to a position of the entry in the plurality of timing wheels;
- placing the entry into a transmit list in response to removing the entry from said one of the plurality of timing wheels;
- removing the entry from the transmit list;
- sending information corresponding to the entry in response to the entry being removed from the transmit list; and
- determining a next target time and re-inserting the entry removed from the transmit list into the plurality of timing wheels based on the next target time.

Claim 31 (new): The computer-readable media of claim 30, wherein the plurality of timing wheels include two timing wheels each having different time granularities.

Claim 32 (new): The computer-readable media of claim 30, wherein the next target time is determined from a last target time.

Claim 33 (new): The method of claim 30, wherein the transmit list includes at least one other entry removed from a particular one the plurality of timing of timing wheels when said removing the entry from the transmit list is performed.

Claim 34 (new): The computer-readable medium of claim 30, wherein each of the plurality of timing wheels are used to schedule information of a same priority level.

In re TURNER ET AL., Application No. 09/705,395  
Amendment A

Claim 35 (new): The computer-readable medium of claim 30, wherein said steps include selecting said one of the plurality of timing wheels, prior to said inserting the entry, based on said one of the plurality of timing wheels having the finest granularity of said wheels of the plurality of timing wheels and whose range includes the target time of the entry and irregardless of a rate corresponding to the entry.

Claim 36 (new): An apparatus for pacing the flow of information from a device, said apparatus comprising:

- means for inserting an entry into one of a plurality of timing wheels;
- means for removing the entry from said one of the plurality of timing wheels at an appropriate time corresponding to a position of the entry in the plurality of timing wheels;
- means for placing the entry into a transmit list in response to removing the entry from said one of the plurality of timing wheels;
- means for removing the entry from the transmit list;
- means for sending information corresponding to the entry in response to the entry being removed from the transmit list; and
- means for determining a next target time and re-inserting the entry removed from the transmit list into the plurality of timing wheels based on the next target time.

Claim 37 (new): The apparatus of claim 36, wherein the plurality of timing wheels include two timing wheels each having different time granularities.

Claim 38 (new): The apparatus of claim 36, wherein the next target time is determined from a last target time.

Claim 39 (new): The apparatus of claim 36, wherein the transmit list includes at least one other entry removed from a particular one the plurality of timing of timing wheels when said removing the entry from the transmit list is performed.

In re TURNER ET AL., Application No. 09/705,395  
Amendment A

Claim 40 (new): The apparatus of claim 36, wherein each of the plurality of timing wheels are used to schedule information of a same priority level.

Claim 41 (new): The apparatus of claim 36, including means for selecting said one of the plurality of timing wheels, prior to said inserting the entry, based on said one of the plurality of timing wheels having the finest granularity of said wheels of the plurality of timing wheels and whose range includes the target time of the entry and irregardless of a rate corresponding to the entry.
